                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alignment Scores:
synuclein that is caused by an A/T single nucleotide polymorphism (SNP) at position 329 of the gamma-synuclein coding sequence. This SNP causes a glutamic acid to valine change at amino acid position 110 of gamma-synuclein, and is associated with an increased susceptibility of individuals to schizophrenia spectrum disorders (SSDs). This is the first time that a genetic component of SDs has been identified, and provides a potential target for diagnosis and treatment of schizophrenia. Gammasynuclein polypeptides, especially those containing the EllOV mutation, are used in a claimed method of screening for compounds useful for the
                                                                                                                                                                                                                                                                                                                                                                                                      Screening for compounds for treating or interfering with the onset of Schizophrenia Spectrum Disorders, by detecting interactions of candidate compounds with the gamma-synuclein polypeptide.
                                                                                                                                                                                                                                                                The present sequence is that of cDNA encoding the Val-110 isoform of human gamma-synuclein. The invention relates to an isoform of gamma-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SAON)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gamma-synuclein; human; single nucleotide

An oligonuclectide complementary to part of the gamma-synuclein coding sequence is used for the discrimination of an SNP at position 329 of the coding sequence. Gamma-synuclein polypeptides or polynucleotides are also useful for the diagnosis of SSDs, or susceptibility to SSDs, e.g. by PCR amplification of a polynucleotide encoding gamma-synuclein and analysis of the occurrence of the SNP at position 329. A transgenic animal useful for the study of SSDs is also claimed. Note: The present sequence is not shown in the specification but is derived from the gamma-synuclein

The invention relates to isolated new isolated protein and nucleic acid molecules useful for diagnostic and therapeutic purposes. The invention is for treating genetic diseases such as muscular dystrophy or cystic

New isolated protein and nucleic acid molecules, useful for diagnostic and therapeutic purposes, e.g. for treating genetic diseases such as muscular dystrophy or cystic fibrosis.

synthesis of DNA and
in gene therapy. The
             The invention relates to an isolated human polypeptide. The polypeptides, polynucleotides, agonists or antagonist are useful for diagnosing or treating genetic diseases such as muscular dystrophy or cystic fibrosis, hypertension, angina pectoris, myocardial infarction, ulcers, asthma, allergies, psychoses, depression, migraine, vomiting, benign prostatic hypertrophy or osteoporosis. The polypeptides and polynucleotides are useful for in vitro purposes related to scientific research, synthesis of

        CC patient is afflicted with ovarian cancer. The method involves comparing CC patient is afflicted with ovarian cancer. The method involves comparing CC the expression level of a marker in a patient sample and the normal level CC of expression of the marker in a control non-ovarian cancer sample, where CC the marker is selected from 363 cancer markers described in the CC specification. The method of the invention is useful in diagnosing or CC characterising cancer, in detecting the presence of cancer as early as CC possible, and the recurrence of ovarian cancer. The method may also be of CC particular use with patients having an enhanced risk of developing CC ovarian cancer (e.g. patients having a familial history of ovarian CC cancer). The cancer markers may be used in the management and treatment CC of e.g. brain and central nerrous system disorders (e.g. bacterial and CC viral meningitis, Alzheimer's disease or Parkinson's disease), brain CC inflammations (e.g. bacterial or viral meningitis or encephalitis), CC inflammations (e.g. bacterial or or viral meningitis or encephalitis),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-MAR-2001; 2001US-0276025P.

testicular disorders (e.g. nontuberculous granulomatous orchitis), connective tissue disorders, or heart disorders (e.g. ischaemic heart disease or atherosclerosis). The compositions and methods may also be used in assessing the histological type of neoplasm associated with ovarian cancer, monitoring the progression of ovarian cancer, determine whether ovarian cancer has metastasized or is likely to metastasize,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Assessing whether a patient is afflicted with ovarian cancer, useful in assessing the stage or progression of the disease, comprises comparing the expression level of a cancer marker in a sample from a patient and

```

The present invention relates to a method (M1) for determining a predisposition for or the occurrence of neurodegenerative disease is subject. The method comprises detecting in a target nucleic acid ob from the subject the presence or absence of an allelic variant of comore polymorphic regions of one or more genes selected from up (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (ine degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal

variant of one

The method is useful in determining the presence or predisposition to neurodegenerative disease, particularly Alzheimer's disease. The pequence is the CDNA sequence of the human SNCG gene which is relative invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Local Similarity:

Isolated nucleic acids and polypeptides, useful, for preventing and treating e.g. leukemia, inflammation and immune disorders. diagnosing

Claim 1; SEQ ID NO 13838; 1399pp + Sequence Listing; English.

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, innunomodulatory activity and activiny, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and ç

This invention relates to a novel method of determining a predisposition for or the occurrence of neurodegenerative disease comprising detecting in a target nucleic acid obtained from the subject the presence of an

Claim 84;

SEQ ID NO 469; 205pp; English.

inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This CDS has been cloned incl. stopcodon.

The CDS has been inserted into pDONR201 via a BP Clonase(TM) reaction. Additional sequence has been added in front of the codon: att. .AAAAAA GCA GGC TCC ACC (ATG).

The stopcodon is followed by the 3' att site: GACCCAGCTTCCTT.

The clone is validated by full sequence check.

The CDS has been inserted into pDONR201 via a BP Clonase(TM)

reaction. Additional sequence has been added in front of the start
codon: att. .AAAAAA GCA GGC TCC ACC (ATG).

The last codon is followed by the 3' att site: GACCCAGCTTCTT. .att

The clone is validated by full sequence check.

Compared to the reference sequence BC014098

we did not find any amino acid exchanges.

The CDS has been inserted into pDONR201 via a reaction. Additional sequence has been added i codon: att. .AAAAAA GCA GGC TCC ACC (ATG). The stopcodon is followed by the 3' att site: The clone is validated by full sequence check.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact RZPD (customer.service@rzpd.de) for further information. Clone name at Harvard Institute of Proteomics (www.hip.harvard.edu): FtH31021.01X
This CDS clone is part of a collection of human full ORF clones jointly established and verified by the Harvard Institute of Proteomics (HIP) and RZPD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Tel: +49 30 32639 100 Fax: +49 30 32639 111

It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor plaza, Houston, TX 77030, USA On Nov 15, 2002 this sequence version replaced gi:23665002. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Muzny, D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_d
NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Assembly program: Phrap; version 0.990329

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The CDS has been inserted into pDONR201 via a BP Clonase(Two reaction. Additional sequence has been added in front of the codon: att. .AAAAA GCA GGC TCC ACC (ATG).

The last codon is followed by the 3' att site: GACCCAGCTTTC The clone is validated by full sequence check. Compared to the reference sequence BC014098 we did not find any amino acid exchanges. Clone distribution: http://www.rzpd.de/products/orfclones/.location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact RZPD (customer.service@rzpd.de) for further information. Clone name at Harvard Institute of Proteomics (www.hip.harvard.edu): FLH130940.0LL This CDS clone is part of a collection of human full ORF clones jointly established and verified by the Harvard Institute of Proteomics (HIP) and RZPD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         www.rzpd.de
